

## VOICE-MESSAGING WITH ATTACHMENTS

### Abstract of the Invention

A network method for using a network telephone voice-mail service, by which a caller may leave a voice-message that includes the identification of an attachment, which may include, as examples only, audio, video, text, programs, spreadsheets and graphic attachments. A video, text, spreadsheet or graphic attachment may be converted to an audible attachment to the voice-mail at the caller's or the voice-mail subscriber's request. Such entries may be made, after receiving an automated prompt for leaving an attachment identifier or conversion request, audibly or by using a keypad entry. A network method is also provided for using a network telephone voice-mail service, by which the voice-mail service may detect an attachment to a voice-mail message and provide access to the attachment to the voice-mail message.
